From Coal Fires and Dirt to Steam and Claspliness in Our Houses.

The city authorities of New York have uthorized General Spinola to convey steam for heating purposes through mains

"Is that all?"
"No; we will reduce insurance rates on

Now, the domestic advantages are greater nousehold help can be reduced, for there will be no furnaces or fires to attend to, no coal to carry up, and no ashes to carry down stairs. Cooking of all kind can be done on a stove which will be provided to subscribers for steam. The heating of a house can be regulated by a child. In one house we can send two hundred

od of generating steam for power in downtown factories and offices?"

"Of course it will, for no man of common sense will spend \$50 a week for generating ateam when he can have the steam
supplied to him for half that money, to
say nothing of the bother and annoyance,
dirt and vexation, consequent on keeping
up fires in boilers, which he will avoid.
Right here I might state that the two interests most affected by this new system are the
coal and insurance companies. Neither
of them want to have the system introduced, because it will affect them injuriously by reducing the consumption of coal
and the rates of insurance. These are the
parties who have been working hardlest to
prevent me getting; this grant, but their
anima is quite plain."

In answer to a question to the point the
General said it was not contemplated
by himself or his friends to begin work or

The proof of the p

would be provided with a "battery" of 16h. If one boiler from any cause should be imposed to the others. In the collect weather, if necessary, the whole of pipes are the first it would not interfere with the operations of the boilers building is such to be deprived of steam at any time, since the boiler building is such to be deprived of steam at any time, since the collect weather, if necessary, the whole a first provided and the steam private or a public school:

The I ally is a system of high pressure in the makes and thus much smaller and less expensive mains and be pipes are at tached than those necessary in the usual exclusively by pressures system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam the string. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam the string. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which is used to advantage in single buildings, could not be employed in an extensive system of steam heating. The latter which

service-pipes are carried under ground to the basement of the buildings to be heated. The boxes are so constructed that what-ever water-condensation there is, is depos-ited in them and carried up by the service-

ed into water.

The cellar-regulators invariably reduce
the pressure of the steam as it enters each
building to from two to four pounds per
square inch, and in this method of regulation consists in a great degree the economy
of the system. Through the comparatively small and invariently piece used as of the system. Through the companion of the system. Through the companion of the system. PREPARE FOR A CHANGE street-mains an immense quantity of steam can be forced at high pressure, whereas at low pressure very much larger and more costly mains would be required; and by the reduction of pressure the moment the steam enters a building all the advantage of the low-pressure system are secured With a pressure of two to four pounds o steam in a house costly iron-heaters may be done away with. An "explosion" at such a pressure is of course impossible; a leak would not be likely to result in serious damage, and many of the heaters are therefore made of sheet-copper, galvaniz ed iron, and tin. Their forms and colors vise.

Thus the old belief that steam could not

certain quarter. General Spinola, in an interview with a New York Herald reporter, gave the following summary of the advantages claimed for the system:

"It costs the city now, so I am informed by the police, \$225,000 a year to carry; away ashes from in front of residences in this city. Now, if this system of ours is universally adopted, there will be one item of economy, for there will be no ashes to cart off,"

"Yes; it now costs \$600,000 a year to heat the courts, police stations, engine houses, school houses, and other public buildings, and by our system we can save one third of that amount, or \$200,000 a year to the city."

"Is that all?"

"No; we will reduce insurance rates one interview with a loss by condensation there may be is been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has been demolished, and at the same time whatever condensation has demolished, and at the same time whatever condensation has demolished, and at the s there is no wasted near at all, for the and water which enters the house or which is condensed after it arrives there is made to perform the duty of a furnace below; and thus, by an indirect as well as a direct pro-cess of radiation, every ray of heat which enters is made to do service until it ex-

pires.

Moreover, after hot water has done this last service in the coil it flows into a tank in the cellar, the overflow of which runs into the sewer. From this tank, filled constantly with water which is chemically pure, a supply of water is carried to all parts of the dwelling, either by atmospheric pressure or by the application of steam. By means of this contrivance, operated by the ordinary steam pressure in each house, without extra pump or engine, water can be drawn for bathing and tollet purposes in every apartment or fed to a tank in the attic above. And this water can be hot of drawn cool at pleasure. Steam is discharged directly, yet without noise, into water in bath-tubs or elsewhere, raising it in a very few minutes to the boiling point, and thus doing away with the old system of hot-water circulation in houses.

But the new system is adapted not to house-warming purposes alone. It is claimed that steam can be served under it to do cooking, laundry-work, and to aid in many other household and business oper-

But the new system is adapted not to house-warming purposes alone. It is claimed that steam can be served under it to do cooking, laundry-work, and to aid in many other household and business operations, besides running machinery. In many large hotels the cooking is now done by steam, and it will be melancholy to many people to hear-that the present expensive apparatus for that purpose may be superseded by steam-stoves, which will bring the custom into general use. Cook bring the custom into general use. Cook-ing, it is claimed, can be done cheaper and better than by a wood or coal stove, and without danger of burning, and with the

RICHARDS THE MURDERER

The boxes are so constructed that whatever water-condensation there is, is deposited in them and carried up by the service-pipes continually, thus leaving the mains free for steam.

In the mean time the water extracted from the junction boxes by the service-pipes is largely reconverted into steam in the cellar of each house before heat distribution begins throughout the building, in their cool atrocity by any of the human of the human construction of the service of the cellar of each house before heat distribution begins throughout the building, in their cool atrocity by any of the human construction of the service of the cellar of each house before heat distribution begins throughout the building, in their cool atrocity by any of the human constructed that whatever water-condensation there is, is deposited in them and carried up by the service-pipes continually, thus leaving the mains free for steam.

In the mean time the water extracted from the junction boxes by the service-pipes is largely reconverted into steam in the cellar of each house before heat distribution begins throughout the building. their cool atrocity by any of the human and it's just as well to let it come now as fiends, who have been heard of in our day.

any other time. If I was standing on the fience I wouldn't give a cent which way I the cellar of each house before heat distribution begins throughout the building, in this wise: A high pressure of from flity to sixty pounds being carried in the boiler and mains, the water of condensation is at the degree of heat due to that pressure when it reaches the "regulator" valve in side the cellar walls. At that point it is wiredrawn, and by a reduction of pressure the reconversion takes place. The steam then passes on to the radiators, hereafter to be described, where it is again converted into water. of hends, who have been hard of in Outcome.

If this was S. D. Richards, the murderer of the the Harelson family. The stories of the villain's exploits in Nebraska and elsewall of the hare sent a shudder of horror through the country, and yet, to look at him as he stood there conversing affably with his visitors on the subject of murder, it was almost impossible to believe that he was the veritable man—the inhuman butcher of a poor woman and her three children, and the slayer of we know not how many more. One man who had listened to the easy conversation of the lagt lagter. how many more. One man who had listened to the easy conversation of the young brute went away from the cell with the impression that it was a case of mistaken identity, and that the prisoner was simply putting up a job upon the interviewers.

As seen in the dim light of the cell Richards appears a

MAN OF MEDIUM HIGHT, WELL BUILT, with strong, brawny arms, hairy hands, and a face that shows unmistakable evidence of its Hibernian origin. There is nothing unpleasant in the countenance, of his crimes, and one of them exclaimed

withstrong, brawny arms, hairy hands, and a face that shows unmistakable evi-dence of its Hibernian origin. There is nothing unpleasant in the countenance. break into a smile—a good-natured, easy smile as that of a man quite at peace with himself, with the world and with God. One looks in vain for the sinister looks, the eye with blood in it, the scowl, the

HE fild NOT WANT TO BE BOASTPUL, and throughout the interview conducted himself with genuine modesty. Only once did there gleam in his eyes something of professional pride when he spoke of the fear he inspired in his pursuers. "They all knew I was a pretty hard man to get away with." he remarked, "and if it hadn't been that I was with a couple of very nice ladies about the time I was taken, and had put away my little six-shooters, I guess I would have added the Sheriif to my list."

Sheriff to my list."

"Are you sure that Anderson knew you?" asked one of his visitors. "Didn't he make some mistake in his man?"

Richard smiled a quiet smile as he replied, "O no, Anderson could make no mistake about that. He knew me very well, or at least he ought to. I know I made no mistake about him. He was dismised and hed his bast dwad hi guised, and had his hair dyed, but I knew him in a minute, and I would have given him a tough fight if I had been alone. The

ing the man who gets in the first shot,—"is the lucky man.

It have nothing to say against Anderson," he continued; "he's a first-class man and knows his business, and he knows me, too. He'll take his man alive if he can, but if he can't, why, he'll put a hole it in the can't, why, he'll put a hole it in the can't, why, he'll put a hole it in the can't, why, he'll put a hole it in the has used me first-rate, but if I had had the chance I'd have remove the can't in him. It's all one to me."

Here the desperade took a long whiff at his eight and it is eight and the chance of the little groupe around his cell.

"I've no objection to tell you anything wou want to know," said he, in answer to The Tribune reporter. "Ask anything you like; I have nothing to hide."

"WHAT INDUCED YOU TO MURDER THE HAR-

"WHAT INDUCED YOU TO MURDER THE HAR RELSON FAMILY

ce I wouldn't give a cent which way

of his crimes, and one of them exclaimed as he went from the cell door: "Well, that as he went from the cell door: "Well, that beats anything I ever came across yet." There was nothing in the prisoner's man-ner during the entire conversation to indi-cate that he was insane, nor did he seem to try to put on the airs of a desperado. Indeed, he looked as mild a mannered man as ever cut a throat. He will proceed to his destination in Nebraska, where it is probable that his punishment will be swift and certain. From that State he will pro-ceed to another where he will be handled according to his deserts.

flower is brighter or more beautiful in color than another, so with the different kinds of restoratives, and which are everywhere so abundant—some are better than others for certain specific purposes. God never created a reptile so poisonous but that where it crawled there grew some means of cure for the venom of its bite. And in the catalogue of diseases to which the body is subject, there is in the providence of nature a remedy provided. It remains for man to discover and determine it. This, so far as it relates or lays claim to, is perhaps more forcibly illustrated in Dunbar's wonderful discovery of Bethesda, in its uses and for what it is a certain specific, than all other instances of medicinal waters on the globe. He was himself a sufferer and given up to die. Providence directed him in an out-of-the-way place to the waters of this spring. "The waters were troubled and he sepped in." He drank and was cured. Thousands followed and were healed. To-day the wonder of its work in the marvel of its cure is the theme of many tongues in all lands; blessings and benedictions follow its course. Parties given up to die approach Bethesda and are restored; forms worn and wasted drink and are rejuvenated; beings tired of life and tired with bodyly affliction breathe asw in the shadow of its shrine, and are given a new lease and better establishment. In all dropsical shadow of its shrine, and are given a new lease and better establishment. In all dropsical tendency its cure is swift and certain; in diseases of the kidneys it is no less certain, and for all disorders or derangement of the urinafor all disorders or derangement of the urinary organs its positive cure is established beyond the possibility of doubt. In general debility, nervousness, and the condition incident to an over-taxed system, nothing has been discovered to equal its effects. Thousands upon thousands verify these statements, and they are composed of as reliable personages as the world possesses. The truth of our declarations can be established periaps better in a visit or by sending for pamphlets.

PREW 4 CAMPBELL,

The Way that Expense and Trouble is to be Saved in the Near Future.

inder certain streets of the city. The whole city is not to be dug up for the purpose, the concession being limited to a certain quarter. General Spinola, in an

"No; we will reduce insurance rates one or one and a half per cent."

"In what way will private parties be benefited by the system?"

"Well, they will have the advantage of the reduction in insurance rates, first of all; then they will be saved about one-half their present expense in fuel. So much for the financial aspect of the case.

Now, the domestic advantages are greater.

nouse can be regulated by a child. In me house we can send two hundred sounds of steam pressure, while next door we can make it but two pounds."

"Will the introduction of the system ineriere in any way with the present method of generating steam for power in downown factories and offices?"

"Of course it will, for no man of company construit such 350 a week for generating steams."

ing the man who gets in the first shot,—"is

and without pain.
Although gentle
in their operation,
they are still the
most thorough and
searching catharsearching cathar-tic medicine that can be employed: cleans-ing the stomach and bowels, and even the blood. In small doses of one pill a day, blood. In small doses of one pill a day, they stimulate the digestive organs and promote vigorous health.

Aven's Pills have been known for more than a quarter of a century, and have obtained a world-wide reputation for their virtues. They correct diseased action in the several assimilative organs of the body, and are so composed that obstructions within their range can rarely withstand or evade them. Not only do they cure the every-day complaints of every-body, but also formidable and dangerous diseases that have baffled the best of human skill. While they produce powerful effects, they are, at the same time, the

ful effects, they are, at the same time, the safest and best physic for children. By their aperient action they gripe much less than the common purgatives, and never give pain when the bowels are not inflamed. They reach the vital fountains of the blood, and strengthen the averteen by freeing. and strengthen the system by freeing it from the elements of weakness.

Adapted to all ages and conditions in all climates, containing neither calomel nor any deleterious drug, these Pills may be taken with safety by anybody. Their sugar-coating preserves them ever fresh, and makes them pleasant to take; while being purely vegetable, no harm can arise from their use in any quantity.

PREFAMED BY from the elements of weakness.
